

C4 Project: Logistics Optimization for Delivery Routes

Objective:

Build a SQL-driven Logistics analytics system to analyze delays, optimize routes, and enhance shipment efficiency by leveraging queries, aggregations. The project aims to answer key business questions, uncover inefficiencies, and recommend actionable improvements based on data analysis.

One of the Brands You Will Work On: **Amazon, Flipkart, Delta Airlines, FedEx, Uber**

Note: The brand you will work on, along with the datasets and a detailed problem statement, will be shared with you by the team at the beginning of child course 4.
